Demo

car1
require "smalruby"
car1 = Character.new(costume: "car
car1.on(:start) do
loop do
move(10)
if reach_wall?
turn
end
end
end

Visual editor

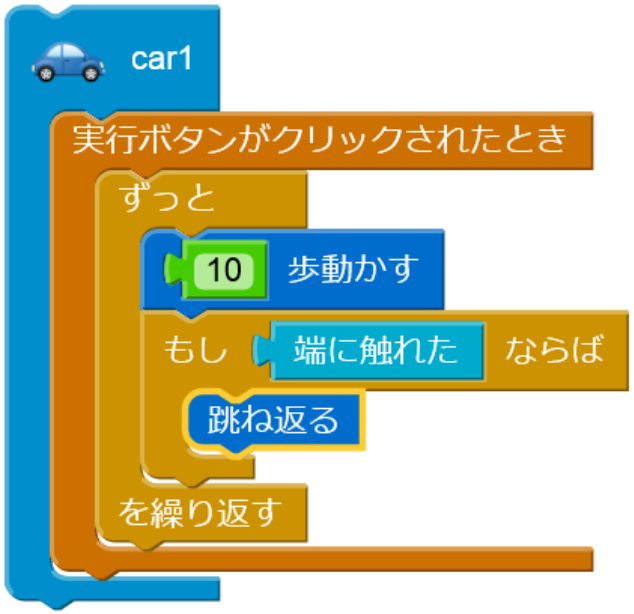
- Rails
- Blockly

Runtime

Windows : DXRuby

Mac,Linux : dxruby_sdl, Ruby/SDL

Instruction Block



```
5  car1.on(:start) do
6    loop do
7      move(10)
8      if reach_wall?
9        turn
10     end
11   end
12 end
```

Ruby

blockly

Blockly is a web-based, graphical programming editor. Users can drag

Check out our sample applications:

- Puzzle - Learn how blocks work while solving this simple country
- Maze - Use Blockly to solve a maze.
- Turtle - Drawing with Blockly.
- Graph - Blockly's graphing calculator.
- Code - Export a Blockly program into JavaScript, Python or XML.

Blockly is international. Help us translate Blockly into even more langu

http://code.google.com/p/blockly/

Define Instruction Block

```
Blockly.Blocks['motion_move'] = {
  init: function() {
    this.setColour(208)
    this.interpolateMsg('%1歩動かす',
      ['STEP', ['Number'], Blockly.ALIGN_RIGHT],
      Blockly.ALIGN_RIGHT);
    this.setInputsInline(true)
    this.setPreviousStatement(true)
    this.setNextStatement(true)
  }
};
```

(歩動かす = move)

/app/assets/javascripts/blocks/motion.js.coffee.erb

Generate Ruby from Block

```
Blockly.Ruby['motion_move'] =
function(block) {
  var arg =
    Blockly.Ruby.valueToCode(this,
      'STEP',
      Blockly.Ruby.ORDER_NONE);
  return 'move(' + arg + ')';
};
```

/app/assets/javascripts/blocks/motion.js.coffee.erb

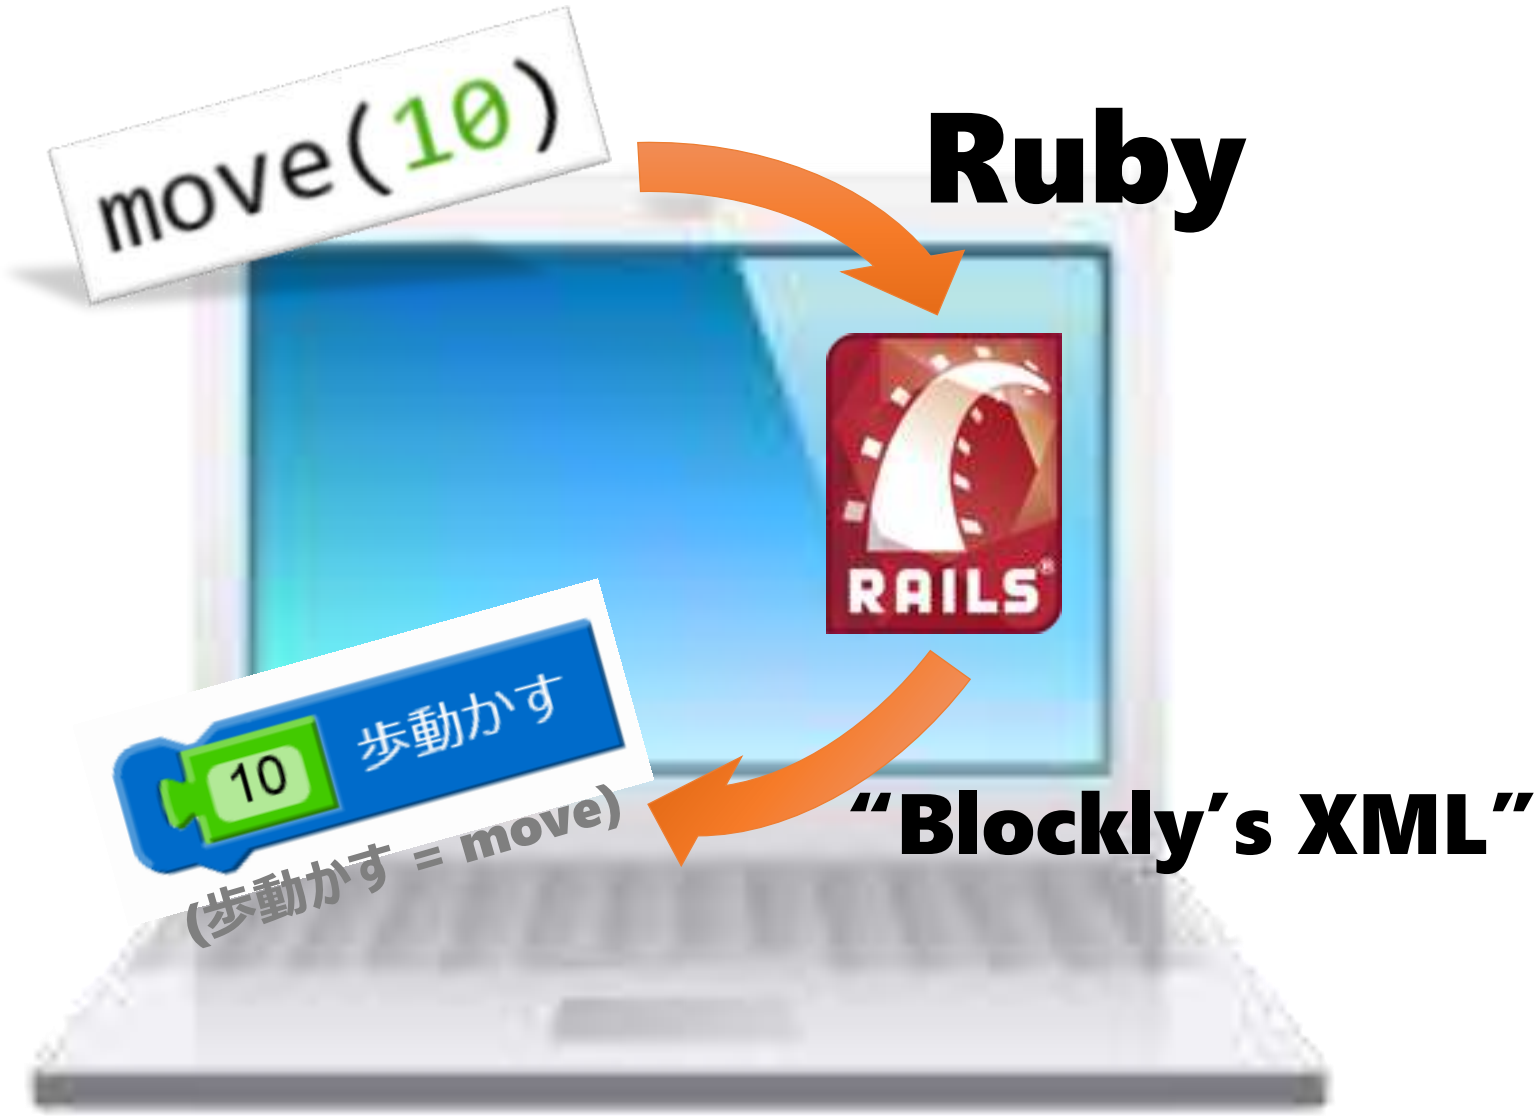
Kids want to challenge!

Ruby

```
move(10)
```

Instruction Block

(歩動かす = move)



move(10)
Ruby
RAILS
10
歩動かす
(歩動かす = move)
“Blockly’s XML”

Translate Block from Ruby

```
class MotionMove < CharacterMethodCall
  blocknize '^¥s*' + CHAR_RE + 'move¥((.+)¥)¥s*$',
                statement: true, inline: true

  def self.process_match_data(md, context)
    md2 = regexp.match(md[type])
    add_character_method_call_block(
      context, md2[1], new, STEP: md2[2])
    true
  end
end
```
